

Unsafe Stone Skimmer Lids

Many Pool Builders may be supplying a tile or stone skimmer lid that is NOT compliant. Some builders are unaware that finger holes in any non-locking skimmer box lid with a weight less than 10.2kg or a lifting force <100N are non-compliant.

Australian Swimming Pool Safety Standard AS 1926.3-2010, requires the skimmer box lid to be childproof.

Home owners are not familiar with the safety requirements and rely on the swimming pool industry to be informed.

If kept unchecked this practice may leave Pool Builders and others open to law suits from the Home Owners in the event of an accident.

Child Safe Stone Skimmer Lids: QUAD Skimmer Lid

The QUAD Skimmer Lid is a compliant solution to a hidden skimmer box lid.

QUAD Skimmer Lid and Key have been designed and patented in Australia to conform to the AS 1926.3-2010 Standard.

The QUAD is fabricated in any paving, stone or tile to match the pool surround.

The 316 stainless steel tray supports the tile and protects it from chipping, cracking or breaking.

No one (especially children) is able to access the skimmer box without the QUAD Key.

*“Make sure your pool is
compliant with the QUAD
Skimmer Lid!”*
